

Task:

Draw a graph showing the number of emails you sent within the last week. Describe the curve of the graph and explain the rises and falls. Write approximately 100 words. Include the vocabulary from your textbook (Unit 5, pages 24, 25).

Solution:

I write approximately five emails per day. On Monday I sent five emails. It was a common day. The count of emails increased to six on Tuesday. On Wednesday I was very busy, so I could respond only to one email. It was very important one. On Thursday I had to respond to all of waiting emails, so the count of outgoing emails goes up to ten. On the Friday we had a problem on server, so a lot of customers asked me what's wrong with that. But it was better than on Thursday. The count of emails decreased to eight. On the weekend I was enjoying my free time, so count of outgoing emails fell down to two or three per day.
